

Installation Guide

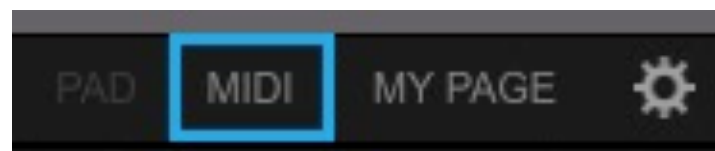

1 - Open Midifighter Utility and click on File —> Import Settings and then select provided “Utility Settings - Spectra.RB.Stems 0.1.0.mfs” file.

2 - Click on “Send to Midifighter” button to apply new settings to the device firmware.

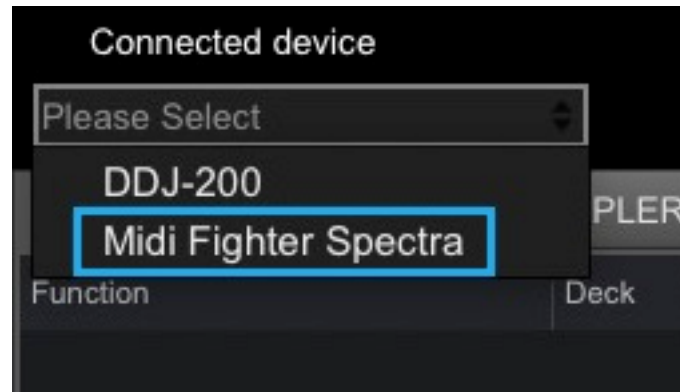

Note: If you are running Windows OS on your computer, close the Midifighter Utility at this point and start Rekordbox DJ.

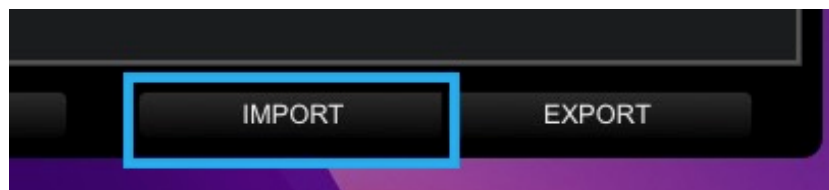

3 - Open MIDI interface by clicking on small MIDI button in master section of Rekordbox DJ.

4 - Click on “Connected Device” menu and make sure that Spectra is selected. This will enable the controller MIDI ports.

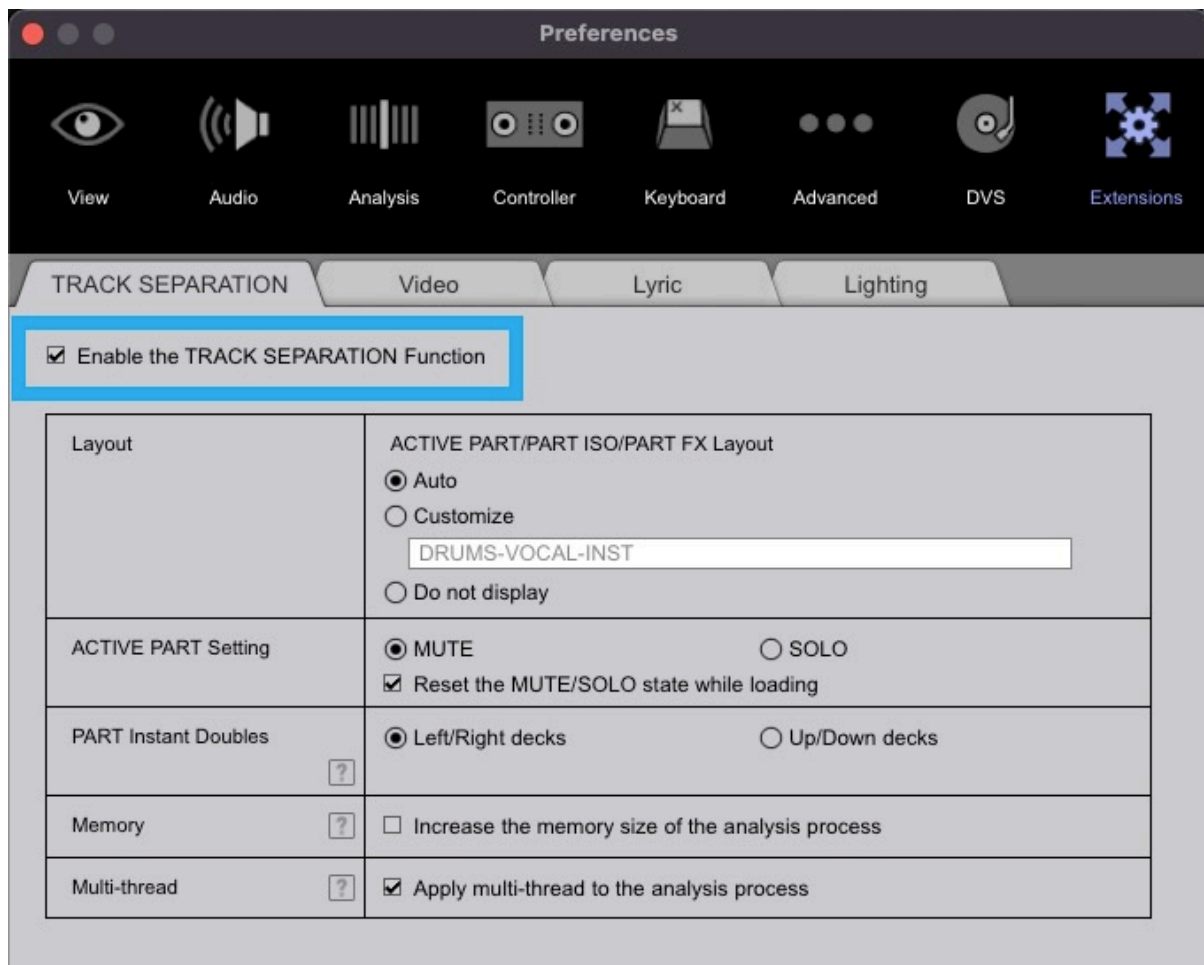

5 - Click on big “IMPORT” button and select the provided “Spectra.RB.Stems 0.1.0” file.

Note: Be sure to backup your current mappings for Spectra by clicking on big Export button because those will be overwritten in this step.

6 - Enable the TRACK SEPARATION Function in Preferences —> Extensions.

Have fun!
